No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 3, A

Sequence 4346, Application US/09710279

Sequence 4346, Application US/09710279

Patent No. 6703492

GENERAL INFORMATION:

TITLE OF INVENTION: STAPHYLOCOCCUS EPIDERMIDIS NUCLEIC ACIDS AND PROTEINS

TITLE OF INVENTION: STAPHYLOCOCCUS EPIDERMIDIS NUCLEIC ACIDS AND PROTEINS

FILE REFERENCE: PU3480US

CURRENT PAPLICATION NUMBER: US/09/710,279

CURRENT FILING DATE: 2000-11-09

PRIOR APPLICATION NUMBER: 60/164,258

PRIOR FILING DATE: 1999-11-09

NUMBER OF SEQ ID NOS: 4472

SOFTWARE: Patentin Ver. 2.1

Rat brain polypeptides, nucleic acids and antibodies, useful for diagnosis and treatment of central nervous system disorders and disorders associated with aberrant apoptosis.

Claim 1; Page 148; 161pp; English.

The invention relates to human homologues of neuronal apoptosis regulated

cc candidate (NARC) nucleic acid molecules and proteins derived from rat brain and programmed cell death libraries. The nucleic acids of the invention are useful for assaying the presence of a nucleic acid molecule and for chromosome mapping. They are also used in gene therapy and and for chromosome mapping. They are also used in gene therapy and carrier and for chromosome mapping. They are also used in gene therapy and carrier and is not therapy and and for chromosome mapping. They are also used in gene therapy and contrain an intense therapy. The NARC sequences are useful for treating central contrain contraint and immune response and for isolating binding partners. Diseases treated include spleem disorders (e.g. tuberculosis and congestive congopasture's syndrome and bronchial asthma), liver disorders (e.g. faundice and hepatic failure), infectious disorders (e.g. viral companing disorders (e.g. cerebral oedema, hypertensive concephalopathy and hydrocephalus), heart disorders (e.g. cysts and splantand myocardial infarction), kidney disorders (e.g. cysts and slommerulonephritis), testes and epididymis disorders (e.g. cysts and syphilis), skeletal muscle disorders (e.g. tumours) and pancreatic disorders (e.g. pancreatic shuman apoptosis regulated candidate (NARC) 168 DNA \$

WPI; 2003-058503/05.

P-PSDB; ABB84606.

Novel isolated programmed cell death-related polypeptide, NARC10 and NARC16, useful for treating disorders associated with abnormal apoptotic process e.g. Alzheimer's disease, cancer, myocardial infarction, stroke.

Claim 1; Fig 4A-C; 123pp; English

This invention describes novel cell death-related polypeptides NARC10 and NARC16, located on chromosome 4q11-4q21 and which have cardiant, antiHIV, mannosuppressive, dermatological, antiHiffammatory, crebipoprotective, concurred to concurred to the concurred to concurred to the concurred to concurred to the concurred to manunosuppressive, cytostatic; thyromimetic, nephrotropic, antidabetic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, antidabetic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, concurred to manuostimulant, tranquiliser, hypotensive and concurred to map NARC genes on a chromosome, e.g. to locate gene invention can be used to madulate NARC10 or NARC16 polymelectides, to map NARC genes on a chromosome, e.g. to locate gene cregions associated with genetic disease or to associate NARC10 or NARC16 with a disease. The polypeptides are also useful for modulating the apportant process, and are therefore useful for modulating and treating disorders associated with increased apoptosis, inhibition of apoptosis or disruptions in cell cycle, for regulating cellular functions including process, and care despendent tumours, uncommune disorders cell cycle. Preferably, the products of the invention are useful for treating disorders associated with abnormally low rate or abnormally high creating disorders associated with abnormally low rate or abnormally high are of apoptosis e.g. concress including follicular lymphomas, crinomas crincluding systemic lupus erythematosus, diabetes, graft rejection, infections caused by herpes viruses, virus-induced infections e.g. infections caused by herpes viruses, virus-induced infections e.g. infections caused by herpes viruses, virus-induced infections e.g. infections caused by herpes viruses, virus-induced concurred infections caused by herpes viruses, virus-induced infections, stroke and repertusion injury), and toxin (e.g. allocated and repertusion), myelodysplastic syndromes cardiomyopathy and valvular heart disease, and carebellar dependence of i disorders, senile dementia, Huntington's disease, hypertension, schizophrenia, attention deficit disorder, mania, anxiety, severe bipolar affective disorder (BP-I). This sequence encodes the human NARC16 protein described in the method of the invention

The invention relates to nucleic acid markers which are overexpressed in covarian cancer cells as compared to their expression in normal (i.e. noncarcian cancer cells as compared to their expression in normal (i.e. noncaced by the markers, antibodies that selectively bind to the encoded by the markers, antibodies that selectively bind to the cenceded by the markers, antibodies that selectively bind to the corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention and a method of treating a corresponding to a marker objectively to a marker of the patient antisense objigonuclectide complementary to a marker of the invention. The marker in a patient sample and a normal level of expression of the marker in a patient sample and a normal level of expression of the marker in a patient sample and a normal level of expression of the marker corresponds to a secreted protein or to a transcribed of septent of the presence of protein or protein fragment to secreted protein or to a transcribed corresponding to the marker. The presence of protein or protein fragment is detected using an antibody that specifically binds with the protein or protein fragment is assessed by detecting the presence of corresponding to the marker. The presence of corresponding to the marker or anneals with the marker or anneals with the marker or anneals with the marker or anneals with the marker or anneals with a portion of the polynucleotide which anneals with the marker or anneals with a patient comparing the level of expression of the marker is a subsequent time, repeating the method at a subsequent time and comparing the level of expression of the marker is a goused for monitoring the method of ovarian cancer in a patient which involves detecting the presence of polynucleotide which anneals with the marker or an anneal with a portion of time and comparing the level of expression of the marker or an anneal of the marker of Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer. Sequence 3499 BP; 1104 A; 610 C; 736 G; 1039 T; 0 U; 10 Other; Disclosure; SEQ ID NO 21000; 106pp; English.

                                                                                                                                                                                     The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polynucleotides of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is of cDNA clone DNA327983 encoding novel human PRO polypeptide PRO83903. The invention provides newly identified and isolated mucleotide sequences encoding polypeptides referred to as PRO polypeptides that are useful in the diagnosis and treatment of immunerelated diseases. Microarray analysis showed that DNA327983 is upregulated 1.5-fold in lesional skin as compared to non-lesional skin from psoriasis patients, up-regulated 1.3-fold in colon samples from Crohn's disease patients as compared to normal colon and up-regulated 1.3-fold in white blood cells from rheumatoid arthritis patients as compared to those
                                                                                                                                                                                                                                                                                                                                                                                                                                                          PRO83903; Crohn's disease; rheumatoid arthritis; gastrointestinal-gen.; antirheumatic; antiarthritic; psoriasis; antipsoriatic; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid encoding PRO polypeptide, useful for diagnosing and treating psoriasis, Crohn's disease, Ulcerative Colitis, or rheumatoid arthritis.

It is also down-regulated 1.5-fold upon activation of CD4 T cells with CD28 or ICAM and down-regulated 2-fold upon activation of monocytes with LPS. PROB3903 can be used in a claimed method of identifying a compound that inhibits expression of the gene encoding it. The candidate compound is especially an antisense nucleic acid. The PRO POLYPEPTIGE, its antagonist or an antibody that binds the polypeptide are used in claimed methods for the alleviation or diagnosis of rhemautoid arthritis. Crohn's disease and psoriasis. A vector comprising the present nucleic acid can be used to transform a host cell, especially a CHO cell, Escherichia coli or yeast, for production of the PRO polypeptide. 70 AGTACAGCATACAGACGATGGAACCAGATAACCTGGAACTAATCTTTGATTTTTTCGAAG CCACTGTACTCCACAAAATGTCCAATAGCTTGGAGATATCCTTAATAAGCGACAATGAGT TCAAGTGCAGGCATTCACAGCCGGAGTGTGGTTATGGCTTGCAGCCTGATCGTTGGACAG ACAATGGTGTTGAAACTCTGGATTCTGGATGGCTGACATGTCAGACTGAAATAAGATTAC GTTTGCATTATTCTGAAAAACCTCCTGTGTCAATAACCAAGAAAAATTAAAAAATCTA GATTTAGGGTGAAGCTGACACTAGAAGGCCTGGAGGAAGATGACGATGATAGGGTATCTC ATGCTGTGGCTCTTCTTCCAGAGAATGACACGGGGAAAGCATGCTATGGAAAGCAACCA CAAAGACTATCGGTGGTCCATGTCAAGTGGTTCACAAGTGGGAGACTCATCTACAAC CACGATCAATAACCCCTTTAGAAAGCGAAATTATTATTGACGATGGACAATTTGGAATCC ATAAATCCATCAGAATGACACCTTCTCAGGTTGCCTTTGAAATAAGAGGAACTCTTTTAC CAGGAGAAGTTTTTGCGATATGTGGAAGCTGTGATGCTTTGGGAAACTGGAATCCTCAAA caggagaagriririgegarareregaagcreregarecririggaaacregaarecreaaa CAAAGACTATCGGTGGTCGTCTCAAGTGATAGTTCACAAGTGGGAGACTCATCTACAAC GCGTCCGGGCGAGGCACGGCGGGCGCCCGGTACCTCTGCCCGGCGGTCCTCGCTCTC Gaps Seguence 5443 BP; 1544 A; 1034 C; 1149 G; 1716 T; 0 U; 0 Other; ö Length 5443; Indels DB 13; ر. ک 98.8%; Score 3166; D 99.8%; Pred. The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (d) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cytostatic; carcinogen; pharmacodyanamic marker; gene; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        70
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.

```
The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GAGCGCTGGCGAGGCACGGCGGCGCCCCGGTACCTCTGCCCGCGGTCCTCGCTCTC 146

The invention relates to human homologues of neuronal apoptosis regulated candidate (NARC) nucleic acid molecules and proteins derived from rat brain and programmed call death libraries. The nucleic acids of the invention are useful for assaying the presence of a nucleic acid molecule and for chromosome mapping. They are also used in gene therapy and antisense therapy. The NARC sequences are useful for treating central nervous system disorders and disorders involving aberrant apoptosis, for inducing an immune response and for isolating binding partners. Diseases treated include spleen disorders (e.g. tuberculosis and congestive splenomegaly), lung disorders (e.g. qualt respiratory distress syndrome, Goodpasture's syndrome and bronchial atthma), liver disorders (e.g. jaundice and hepatic failure), infectious disorders (e.g. viral bepatitis), brain disorders (e.g. cerebral oedema, hypertensive encephalopathy and hydrocephalus), heart disorders (e.g. theoretic or signer and myocardial infarction), kidney disorders (e.g. pancreatic syphilis), skeletal muscle disorders (e.g. tumours) and pancreatic clasorders (e.g. pancreatics and diabetes). The present sequence is human neuronal apoptosis regulated candidate (NARC) 9B DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1051

ai F, Rudolph-Owen LA; Chiang LW, Hunter JJ;

New isolated nucleic acid molecules and polypeptides (e.g. 27411, 23413, 22438, 23553, NARC SCI or NARC 1) useful for diagnosing, preventing or treating disorders associated with the protein, e.g. cancer,

Claim 1; SEQ ID NO 32; 260pp; English.

The present invention provides isolated nucleic acid molecules and proteins designated 27411, 23413, 22438, 23551, 25278, 26212, NARC 102, NARC 103, NARC 11, NARC 113, NARC 15, NARC 25, NARC 3, NARC 4, NARC 11, NARC 113, NARC 15, NARC 19, NARC 26, NARC 27, NARC 28, NARC 29, NARC 20

Sequence 2738 BP; 880 A; 450 C; 540 G; 868 T; 0 U; 0 Other;

77.4%; Score 2481.8; 99.7%; Pred. No. 0; 0; Mismatches

B-cell; Identifying a compound capable of treating a hematological disorder comprises combining a compound to be tested with a polypeptide related with the disorder under conditions suitable for binding of the test haematological; cytostatic; erythroid; anaemia; erythrocytosis; bone marrow; leukaemia; platelet; thrombocytopenia; thrombosis; T-cells; neutropenia; gene therapy; human; ss; gene; Narc16b. protein"

æ The invention relates to a novel method for identifying a compound capable of treating a haematological disorder which comprises combining compound to be tested with a specific polypeptide under conditions

Tue

cc suitable for binding of the test compound to the polypeptide. The method CC of the invention has haematological and cytostatic applications and may be useful for identifying compounds for treating a haematological disorder associated with erythroid cells e.g. anaemia and erythrocytosis, come marrow e.g. leukaemia, platelets e.g. thrombocytopenia and thrombosis or B-cells and T-cells e.g. neutropenia. The compounds identified may be utilised during gene therapy procedures. The current cell center is that of a human haematological disorder-related cDNA of the convente con

/product= "glycerophosphodiesterase 25"

```
The present sequence encodes the human glycerophosphodiesterase 25 protein (I). (I) and the polynucleotide sequence encoding it (II) are applicable in the diagnosis and treatment of malignant tumnor. haemopathy, HIV infection, immunological diseases and various inflammation. (I) has cytostatic, anti-HIV, immunomodulatory and antiinflammatory activities. (I) is also useful for screening mimics, agonists, antagonists or inhibitors, or for use in peptide fingerprinting identification. The polynuclectide can be used as primers for nucleic acid amplification reaction or as probes for hybridisation reaction, or

NARC 8B, NARC 9, NARC 2A, NARC 16B, NARC 1C, NARC 1A, NARC 25, 86604 or 13222. The invention is useful in diagnosing, preventing or treating disorders such as cancer, lung diseases, cirrhosis, hepatitis, atherosclerosis, myocardial infarction, inflammation, anaemia, glomerulonephritis, osteoporosis, AIDS (acquired immunedeficiency syndrome), Parkinson's disease, AIDS (acquired immunedeficiency dermatitis. These may also beed in drug screening. The invention is also useful in gene therapy. The present sequence is rat neuronal apoptosis regulated candidate (NARC) cDNA.
                                                                                                                                                                                          TAAGAGGAACTCTTTTACCAGGAGGCTCTTTGCATGTGTGGAACTGTGATGCCTTGG
